

Deep Dubey

Software Engineer

Hyderabad, India — +91 9052057751 — deepdubey1995@gmail.com — LinkedIn — GitHub

Professional Summary

Software Engineer with 4+ years of experience building secure, compliant, and scalable data pipelines for the financial services and fintech domain, including lending, investment, and portfolio management platforms. Hands-on expertise in Azure (Data Factory, Databricks, Synapse Analytics, ADLS Gen2, Blob Storage) and Snowflake for enterprise data warehousing, financial data modeling, and transformation of high-volume transactional data. Proven track record of improving pipeline performance by up to 40%, strengthening data quality and accuracy for regulatory and audit reporting, and delivering reliable, production-grade data solutions in Agile environments for banking, lending, and investment workflows. Strong background in SQL, Python, and DBT, with experience implementing role-based access control and secure handling of sensitive financial data.

Technical Skills

Cloud Platforms: Microsoft Azure (Data Factory, Databricks, Synapse Analytics, ADLS Gen2, Blob Storage, Azure Functions), Google Cloud Platform (GCS, BigQuery, Dataproc, Cloud Composer)

Data Warehousing: Snowflake, Azure Synapse Analytics, BigQuery

Big Data & Streaming: PySpark, Apache Kafka, Schema Registry

Data Transformation & ETL/ELT: DBT (Data Build Tool), Azure Data Factory Pipelines, SSIS, Data Modeling, Data Cleansing

Languages: SQL, Python

Databases: MySQL, SQL Server, Snowflake, MongoDB

Orchestration & Workflow: Apache Airflow, Cloud Composer, Azure Data Factory, Scheduled Pipelines

Infrastructure & CI/CD: Terraform, GitHub Actions, OIDC Authentication, CI/CD

Dev Tools: Git

Domain Expertise: Financial Services & Fintech, Lending & Investment Platforms, Transaction Data Processing, Data Security & Access Control, Regulatory & Audit Reporting

Other: Agile/Scrum, Data Quality & Validation, Performance Optimization, Data Visualization (Chart.js, Power BI), MVC

Professional Experience

KFin Technologies Ltd –

May 2024 – Present

Software Engineer (LAMF (Loan Against Mutual Fund))

- Designed and maintained financial data pipelines feeding the LAMF (Loan Against Mutual Fund) lending platform, integrating high-volume transactional data into Snowflake using Azure Data Factory for regulatory and business reporting.
- Built and optimized DBT/SQL transformation workflows and migrated legacy data extracts to an Azure Data Factory-based ingestion process, improving data processing efficiency by 35% and cutting manual intervention by 30%.
- Implemented data validation and monitoring checks on critical lending and transaction pipelines, improving data accuracy and reducing downstream reporting errors by 20% to support audit and compliance needs.
- Debugged and resolved production data issues on customer-facing financial platforms, reducing client issue turnaround time by 40%.
- Developed compliance and business dashboards using Chart.js and Power BI, translating warehouse data into real-time insights for finance and risk stakeholders; collaborated with backend, data, and QA teams within Agile sprints.

Exavalu Solutions India Pvt Ltd –

Sep 2022 – Dec 2023

Developer – Group SIP Platform

- Built and maintained data pipelines for the Group SIP (Systematic Investment Plan) platform, extracting and transforming investor contribution and transaction data into a central warehouse using SQL and scheduled jobs.

- Designed data models and transformation logic to consolidate SIP contribution, portfolio, and corporate data, improving data processing efficiency by 25% and reducing reporting turnaround by 20%.
- Built and optimized scheduled data ingestion pipelines pulling data from backend financial data warehouses for Group SIP reporting, improving data refresh performance by 15%; implemented data validation checks and role-based access control to secure sensitive investor data.
- Participated in sprint planning, code reviews, and Agile ceremonies; worked with data and business teams to translate Group SIP reporting requirements into reliable data pipelines and dashboards.

Exavalu Solutions India Pvt Ltd –

Dec 2021 – Aug 2022

Trainee – Group Insurance Policy Management Portal

- Assisted in building ETL scripts to ingest, clean, and structure policy and claims data from multiple source systems into standardized formats for downstream reporting.
- Wrote SQL queries to extract, clean, and validate policy issuance and claims data, supporting accurate downstream reporting.
- Collaborated with design and data teams to convert business requirements into data-driven reporting layouts, gaining hands-on experience in Agile development and version control with Git.

Projects

Financial Trade Processing Platform – GitHub

- Built a production-style financial trade data platform on GCP (GCS, BigQuery, Dataproc, Cloud Composer) using PySpark, implementing 10+ business validation rules (duplicate/null trade IDs, invalid customer/account/security, negative price, future-dated and high-value trade detection) with automated reject handling and audit reporting.
- Designed a Star Schema (Fact Trade with Customer, Account, and Security dimensions), writing curated Parquet datasets to GCS and loading analytics-ready tables into BigQuery; orchestrated the full workflow with Apache Airflow DAGs on Cloud Composer.
- Provisioned infrastructure as code with Terraform and automated testing/deployment via GitHub Actions CI/CD; built Looker Studio/Power BI dashboards for trade volume and high-value trade analytics, backed by a pytest suite covering validation and load logic.

Enterprise Sales ETL Pipeline – GitHub

- Built an enterprise-grade sales ETL pipeline on GCP using PySpark, orchestrated with Apache Airflow on Cloud Composer and executed on auto-provisioned Dataproc clusters, with GCP Cloud Functions handling event-driven automation.
- Implemented CI/CD with GitHub Actions using OIDC-based authentication (no static cloud credentials), including pipeline monitoring/alerting and a pytest unit test suite for data transformation reliability.

Banking Real-Time Data Platform – GitHub

- Building a real-time banking data platform using Apache Kafka (topics, Schema Registry) to stream simulated transaction events, landing raw data into Google Cloud Storage for downstream processing.
- Orchestrating ingestion workflows with Apache Airflow and structuring environment/dependency configuration for reproducible, production-style deployment.

Education

Master of Computer Applications (MCA)

June 2019 – July 2022

Birla Institute of Technology, Mesra

CGPA: 8.27

Soft Skills & Collaboration

- Strong communication and stakeholder presentation skills; experienced in Agile/Scrum teams and retrospectives
- Skilled in code/pipeline reviews and mentoring juniors; strong analytical mindset focused on performance and cost optimization
